

## Drinking Water

As our bodies are made up of predominantly water, it makes sense to ensure that our water is free from harmful chemicals, heavy metals, pesticides and parasites.

Drinking filtered water has endless health benefits including, reduced risk of gastrointestinal disease, a stronger immune system, healthy glowing skin, reduced muscle and joint inflammation and generally greater overall health and wellbeing.

Our high quality FilterFresh 1 micron KDF/GAC filter is manufactured in the USA and used in the reduction of chlorine, heavy metals, herbicides, pesticides, odour and taste. Leaving your water clean, clear, crisp and fresh.

With regular servicing and a range of taps to suite every taste... FilterFresh gives you the full package!

Fully transportable benchtop filter - perfect for renters, the bach, caravan or boat!!

**100%** Satisfaction **MONEY BACK** GUARANTEE. Plus a 3 year warranty on all products!

WATER PURIFIERS LTD

How pure is  
your water?

# The Water Journey

This is where all our water starts, a mixture of rain and pure spring water, it is rich with minerals and untampered by man. It is pure, clean, clear water.

Then our water ventures here. At the treatment plant they add chlorine to try and kill off the parasites, lime to stop their pipes corroding and fluoride for 'dental safety'.

More and more studies are proving there can be health issues with long term consumption of chlorine, heavy metals and their by-products, which your body can't break down effectively. It makes sense to filter it before it reaches your family!

*Watercare states that drinking water should be placed in a water container and left to stand for 2 hours (or put in the fridge to be used as needed)*

# Whole House Filtration

If you suffer from skin irritations, dermatitis, eczema and even asthma... absorbing chemicals through your skin while bathing could be adding to your irritations. Our whole house filter can ensure clean drinking and bathing water and be your complete water solution! Talk to us now for more information!

## Multi Layer Sediment Filter

Multiple layers of 100% propopolyne graded from 20 microns down to 1 micron.

What it does:

- removes 99% of Giardia and cryptosporidium
- improves clarity and colour of water
- removes sediment and debris

## KDF Filtration

KDF is a process that bonds heavy metals and also converts contaminants into harmless compounds.

What it does:

- stops bacteria forming in the GAC
- removes a wide range of heavy metals
- extends the GAC's lifespan and improves its effectiveness

## Granulated Activated Carbon

GAC has a very high absorption rate of organic compounds and also has an electro charge that attracts chemicals.

What it does:

- removes taste and odours
- removes herbicides and pesticides
- removes 99% of chlorine

*\* optional fluoride removal available*

*Did you know in a ten minute shower your skin, your bodies largest organ, absorbs around the same amount of chlorine as you would consume in 8 glasses of water? Scary right! Talk to us today about your whole house filter!*
